functions you'd expect in a Canon allinone are here. It's smaller than some earlier Canon printers, but this means the paper cassette, which fits under the printer, sticks out the front. Although it's obscured by the output tray when you have the front cover down, it looks less sleek when the printer's closed. There's a second paper source, a rear tray brought into play when you fold up the top cover. Canon provides two blacks, one pigmented for strong, black text and one dyebased, to be compatible with the other colours. As you clip each cartridge in place, a red led indicates it's properly located; it also flashes when ink is getting low. While there are slips added to the manual advising you to load the rear tray only with photo paper and the cassette with plain A4 sheets, the installation routine for printhead alignment insists you load plain paper into the rear tray.Canon claims 12.8ppm and 11.2ppm in best mode for black and colour pages, while we saw 5.45ppm and 4.

05ppm in normal print mode, on 5page test prints. Even on the 20page job, a lot larger than is typical for home or office documents, the black page speed only went up to 5.77ppm, still not close to the specified figure. First is the delay between printing first and second sides. To allow for ink drying, the machine halts for around five seconds at the end of printing the first side, so our 20side document took 8mins 14secs to complete, while the singlesided version of the same job took 3mins 28secs, less than half the time. These two factors considerably reduce the advantages of doublesided printing. Black text is crisp and clean, with no visible feathering of the pigmented ink. Colour graphics are also good, with vibrant colours and better registration of black text over colour than we saw on the PIXMA iP4500. Doing the maths gives a black text cost of 2.57p and a colour page cost of 6.11p. These are both higher than from the PIXMA iP4500, the next model down Canon's range, and are not particularly good against many of its rivals. The restriction on paper trays and the associated confusion in its firmware look to us like problems that have come to light since launch. Duplex print is slow and not as black as singlesided, making it only really suitable for internal documents. We use industry standard tests in order to compare features properly. We'll always tell you what we find. We never, ever accept money to review a product. Increasingly more, common inkjet printers are being changed with allinones AIOs on the one hand and greatly photocentric printers on the various other. The Canon Pixma iP4600 is among minority costeffective inkjets that still get the common inkjet category, although even it consists of a few photocentric touches, most especially a PictBridge connector. Furthermore, the printer uses 5 private ink containers as well as wise LED technology so you could keep track of ink use.

The iP4600 Photo Printer is even furnished with twin paper courses for better convenience, removing the moment consumed switching over paper types. Though message web pages left at a snail's speed of 7.3 web pages each minute ppm, they looked black and crisp on all but the most intricate font styles. Pictures were a little grainy and also light, yet still appropriate. Naturally, Canon's very own photo paper enhanced issues Images showed better detail and smoothness, and flesh tones were pleasing regardless of containing a slight hint of yellow.You need to start printing a page to make sure that the printer has been successfully installed. Installation starts automatically. The network information page will be printed. Well assume youre ok with this, but you can optout if you wish. I get my most wanted eBook Many thanks If there is a survey it only takes 5 minutes, try any survey which works for you. Image quality meets my expectations, it has some impressive features and it costs a lot less than expected. Because of the good luck I've had with Canon printers, I decided to stick with the brand. Plus you get a lot more features for the money. My i960 had six

and I always thought more is better. A Canon sales person explained that inks have improved during the years. For consumerlevel photo printers, there is no longer the need for photo magenta and photo cyan. Next day shipping was free too. Fortunately, the instructions in the Getting Started Guide are very easy to follow. The iP4600 is a fairly large printer, but is better and more contemporary looking than my previous printers. It has some useful features such as automatic duplexing, two paper trays and automatic paper selection.

Images produced by the iP4600 are on par with it; in fact overall the colors seem ever so slightly more truetolife. Using Canon's own photo paper and ink tanks yield photo lab quality prints with a longevity of up to 300 years! When plain paper is selected A4, B5, A5, or lettersize the printer feeds the paper from the bottom Cassette. If you select other paper types such as matte photo paper, the printer prints from the Rear Tray. You can override this by manually selecting the paper source as you go through the printing steps. If you're not into editing photos with special software, this method may be all you need to spruce up photos. An EL6 file is created filename.el6 that remembers your photo selections and settings. An associated Data folder is also created that contains copies of the cropped and edited photos. Simply click on the EL6 file to open the same print job. Very convenient and useful. To get a full understanding of some of the new features and functions, you really need to read the manual. It is fairly easy to navigate and information is wellwritten and illustrated. The features are much improved over other printers I've owned, image quality meets my expectations and it costs a lot less money than expected. It never had clogged nozzles and I never had to buy new print head. I personally attribute this to using only Canon ink tanks and performing routine maintenance a nozzle check, and an occasional cleaning or deep cleaning of the print head if needed. If you need larger prints, you'll need a wide format printer or use a printing service. Thank i do wait for your repliz. Try uninstalling and reinstalling the software that came with the printer including the driver. If that doesn't help, it's best to call Canon Tech support. If one is not in place, the printer will not function. If the ink tank is full but not printing, try to do a print head cleaning; if that doesn't solve the problem, do a deep print head cleaning.
