For this reason, many engineering economic decision problems from the service sector are presented in this 5th edition. Excel spreadsheet modeling techniques are incorporated into various economic decision problems to provide many "whatif" solutions to key decision problems. All the endofchapter problems are revised to reflect the materials changes in the main text.

Please try again later. Darian 2.0 out of 5 stars But for some reason the book that I have references the compound interest tables that should be in the appendix but the tables arent in the appendix. Very annoying especially since that is the main reason I purchased the book, to have access to those tables, so I could do my homework more easily like my professor suggested. There's a lot of examples in it. I like it very much. I would definitely recommend this to anyone that needs it. It is a bit bulky, but then again who cares when you can save all the money and weight of a hardcover. I have to mention the most annoying thing in this book Example problems often reference previous example problems. That's normal. BUT this book builds on that to a stupid degree. I think the author was lazy and the editors didn't care. Those example problems are very hard to follow. Example numbers are not actual problem 6.8 references problem 6.7, but 6.

7 references problems 6.6 and doesn't have its own dataset. Either way, it's a good book, it is full of examples and diagrams. Current and up to date. Way too pricey to own rental. That's why only 3 stars. Sorry, we failed to record your vote. Please try again. Please try again.
