The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Terrence C. Watson 2.0 out of 5 stars But this new label printer is too old a model to work with my new Microsoft Surface Studio computer. The Surface Studio only has USB3 ports, which are backwards compatible with USB2 which is backward compatible with USB1, except apparently not if it is made by Brother. Because new computers typically no longer come with CD drives, I had to download the driver for it from the Brother site; no problem, that was expected. But when I tried to print a test print, I got the alarm that it was not compatible with USB3. I tried fooling it by running it through a USB2 port on a USB2 multiport box plugged into the USB3 port on the new computer. That didnt work either, as expected. I connected the label printer in to that computer, and it ran the test print fine.

But the software to make the labels looks even more antique than the printer itself. I haven't yet been able to figure out how to format and print a label with it, and am not sure it is worth the effort to keep an outdated computer on standby just to run an outdated label printer with outdated software. I almost never return anything, figuring I am at least partially responsible for making the bad

decision to buy it. But if you are running Windows Vista on a ten year old computer, it will probably work. I will fret about it overnight and decide in the morning whether it is going back or not. It prints labels quickly and reliably, and was very easy to set up and use, going from a Vista 32 bit machine to a Windows 7 64 bit machine without a hitch. I downloaded the drivers directly from brother's website, and I recommend everyone to do the same. I have absolutely nothing bad to say about the QL500, it has earned its keep many times over. One for use, one for backup. I was already impressed with the specs from reading online. It improved on the QL500 in most ways; better print quality, faster, smaller and more compact but without sacrificing build quality, detachable power cord the QL500's power cord was attached; I like detachable cords as they're easy to replace in the event the original is damaged and an auto cutter. I know the QL550 had an auto cutter, but at the time I was in the market for a label printer it was twice what I paid for the QL500 and the only advantage was the auto cutter. A big deal not mentioned a lot is the cutter life. On the QL500, the cutter life is 5000 continuous labels the kind I use for shipping labels. For the sake of comparison this is around 14 labels a day for one year. I've never done that many my max was maybe 100 labels a month, or 34 a day and my QL500 is still cutting pretty smooth. On the QL570 the cutter life is 150,000 continuous labels, or 411 labels a day for one year. I doubt I'll ever hit that mark.

I think the cutter will outlast the printer. One small disadvantage though, is that the cutter on the QL570 isn't replaceable like the one on the QL500. But by the time you factor in the cost of replacement blades, after buying replacements 3 or 4 times you've spent enough to buy a QL570 and don't get nearly as many cuts for 4 sets of 2 replacement blades plus the one that comes with the QL500 and you'd be at 45,000 cuts, so really, there's no reason to buy the QL500 over the QL570, especially with the price of the QL570 constantly falling under half a benjamin. Other small advantages over the QL500 include a multicolor status light the original was the single green led and a 25 sample roll of continuous paper tape the QL500 only included the sample roll of address labels along with the sample roll of address labels. As with the QL500, setup was a cinch. I made sure to first go to brother's website and grab the correct drivers for my operating system Windows 7 64 bit and the latest version of PTouch Editor. Again, I was up and printing my labels within minutes of opening up the box. I really can't understand why so many others have so much trouble, and then blame Brother and rate the QL570 poorly because of their own incompetence. The QL570 prints quickly and reliably, and the print quality is spot on. I just catch the labels with my hand as they come out. Or let them land on the shelf where the label printer is stationed. Changing rolls is quick and simple, as it should be. The labels themselves can be expensive, but I usually stock up when they're on sale. There are also aftermarket alternatives. I paid less for the QL570 than what I did for my QL500 and couldn't be happier. It's an excellent label printer, especially if you sell things online. Before you start all these machinations, make sure you close all other applications. 2 You have to get the Windows 8 software and printer drivers from Brother Solution Center.

You have to know whether your operating system is 32 or 64 bit. 3 For some strange reason, Brother downloads ONLY work with Microsoft Explorer and if you don't use that browser to get the downloads, you'll be asking for trouble. 4 Make sure you download your printer drivers to a place you can find them. Otherwise, you won't be able to open them and install them. 5 Make sure your device is NOT connected when you're doing the Windows 8 installation. 6 After all the nonsense of downloading stuff, you will need to restart your computer. Once you've done all that, you can actually USE your device. It's pretty slick except it's a little difficult to know what kind of labels are installed, if you haven't used this before. There's a "Check Media" button that allows you to immediately know what you've got in the device. After that, it's all pretty easy. The labels are nice and readable and it appears from the software there are a lot of options. I would have more to assess if it hadn't taken me TWO HOURS to figure out the problems with Windows 8. Brother really needs to update their installation CDs for this product for people who have Windows 8. Otherwise you need to

be really aggressive in finding the solution to installation. Very versatile. Had it for home, and loved it, and decided to buy one for the office. In the box you get 2 starter rolls, which are plenty to get a good feel for the unit. A DK2205 100ft Roll seems to last forever. Print quality and adhesive is pretty much identical to the original Brother rolls. Takes a little time to get used to their Software, but once you get used to it, it is OK. I use it to for print runs which import the DATA from EXCEL sheets, and include bar codes with it also. I also use it to print labels my kids need to tag their school supplies. A lot cheaper in the long run than buying avery sheets. Removed 1 star because I was a little disappointed that Brother has discontinued the DKCL99 QL printer cleaning sheets.

Contacted them, and the only thing they did was send me an amazon.com link, of 3rd party vendors selling probably old stock, and ALL ship directly from Japan. A Little disappointed. Cleaning sheets for CURRENT model printers all QL series and already discontinued with no suggested replacements. But they DO include 1 cleaning sheet in the box; Sorry, we failed to record your vote. Please try again However, once the label is designed, click on print and it will auto cut every label. HUGE time saver! In the package, you will find 2 roll of label, small one and bigger one. It will give you a great idea how the machine can perform before purchasing other rolls. Highly recommended. Sorry, we failed to record your vote. Please try again It took me a full evening to figure out how to use the included software to make the perfect template, and copy in a csv file of EnglishArabic translations, but once I figured it out, it worked like a charm. 15 minutes later I had 200 perfect labels in a gift box. Its way more powerful, but the learning curve is correspondingly higher. Sorry, we failed to record your vote. Please try again But Still Worth the purchase Layout Editor was Very easy to use so it was simple to make it the way I want Fonts and all. Sorry, we failed to record your vote. Please try again For the prospective customers using Windows 8 be aware, you might not be happy. I have several different Brothers refusing to cooperate with new Win 8, but they work perfectly with Win 7. Sorry, we failed to record your vote. Please try again The built in automatic cutter is incredibly convenient. I use this with my Mac and while the software looks a bit dated, all the functionality to create templated or custom labels in a variety of formats. A higher end model that supports wireless connectivity and AirPrint for Macs and iOS devices is also available. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Trying to print stamps.

com labels on this thing is proving to be a pain though. This thing has a better DPI than my laser printer, but images still come out blurrier. Could be the software still havent figured out how to make this work with Word 2013. Sorry, we failed to record your vote. Please try again Really great machine, prints fast, quite when its idling, and it feels well made, it came with two size label rolls. The rolls are not too expensive to replace. Sorry, we failed to record your vote. Please try again Easy to setup and use. Very pleased with this Brother product. Sorry, we failed to record your vote. Please try again Bought when on sale, similar price than the DYMO PnP LableMaker, but with far more capabilities. Also the labels are pretty cheap as well. Sorry, we failed to record your vote. Please try again Easy learning curve as it is all on screen in live time. Very quick and easy to use. Best bargain of 2013 for me! Sorry, we failed to record your vote. Please try again At first I wasnt sure how to make it work but I just took Amazons PDF of the barcodes and used the snipping tool to get each as an image file. Then just set up the label template with that image to print. Worked like a charm! Sorry, we failed to record your vote. Please try again They are simple to use, well priced, and they just do what they are supposed to do. This label printer is quite versatile as it is capable of printing different sized labels, and it does it quickly and conveniently with its autocut feature. I bought a bunch of replacement label reels as we go through a lot of them. Sorry, we failed to record your vote. Please try again. Instantly register your product for extra benefits. Print up to 300 x 600

The item may be missing the original packaging such as the original box or bag or tags or in the original packaging but not sealed. The item may be a factory second or a new, unused item with defects or irregularities. This printer was super easy to use. It printed beautifully. The first time it printed I thought it had just spit out paper it was so fast I was really impressed. I also like how small it is I feel like I could put it anywhere. The enclosed software was easy to install. I never thought about a label printer because I always used my inkjet printer. I looked at label printers at Staples and decided to look on ebay. I found several models and decided on the brother QL570. The price was a bargain so I decided to order on ebay, I also purchased a warranty to cover the printer. I am very pleased with this product. I had always wanted a label printer, but thought they were too expensive, and that I wouldn't use it. This was an Ebay special deal so the price was right. I found I used it to label packages my Christmas presents were sent out in style this year. Easy to load, easy to operate This is a great item don't hesitate getting one for your home or office. I am not very mechanically inclined, so if I can use this Label Printer, anyone can. by johnsonstuff.s. Dec 21, 2010 Brother Label Maker This labeler was a great price and the labels are economical. Great for marking files, boxes, spices in the kitchen you buy bulk and put in smaller containers, just about anything you want to look professional. I've had several Brother Labelers and they have been all great and they last. I like the font features and special affects they offer also, besides a wide variety of label sizes and colors.

I bought it for a coworker because it was a good price and had the options he needed. Cancel Thanks, well look into this. All Rights Reserved. Just call ERS and speak with one of our team, wholl be able to help you find the best printer. So far I have not done well at finding bar code packages for Perl and I have found NOTHING to help me write directly to the printer. I can use the CODE128 specification and generate my own bar codes using PerlMagick but I am totally lost when it comes to writing to the printer. I can not find example using Perl and I dont even know if the printer is PostScript or another format. Thank you, Bruce Comment on using Brother QL570 printer with Perl Try perldoc f print at the command prompt. Or, if youre using ActiveStates distribution, try ppm search barcode at the command prompt. For my win32 Perl 5.12.4, that returns more than a dozen candidates, some of which may even be relevant to your needs. When I have had experience with something and see a question I often take the time to share my experience or give a suggestion or two. Trying to use custom written Perl code under Linux I have not found anything helpful. Brother does not seem to have a phone number to call for these types of questions. I have posted a question on their web site. The web site states that it often takes 3 days to get a response. I will do a little more searching on Perl support of barcodes but if I cant talk to the printer it will be a waste of time.

I dont have a clue if sending data to a USB connected barcode printer is easy or not. So far getting information is not easy and getting help is not working out too well. Once again I am faced with the question authoring problems. If I ask a short question I get attacked for not doing my own work. If I ask a long question with lots of details and demonstration of work I bore people and give some lots to shoot at. When I go for the middle ground it doesnt seem to work well either. If the printer is accessed through a serial connection over USB, you might get lucky and be able to use whatever serial printing protocol is available. Maybe even using PCL5 already is enough. If clarification of that is needed, consider printing your barcode labels to the particular printer is your project; not ours; not Googles or Bings or Yahoos; not Brothers; and repeat not ours. PM exists to help folks who help themselves learn Perl; not to solve incidental and OT problems like attaching a printer. Why not search the web for the manual and find at least some of your answers there. Brother International in the United States At Your Side. Brother QL570. Professional Label Printer. Dear Brother Customer,

Unfortunately, there is no technical manual available for this model. Thank you for your inquiry. The Global site contains the docs you need. Its very simple and straight forward in my opinion. That leads me to believe that you can set that up and potentially use Win32OLE to enter data including bar codes into Excel or Access and print from there. Ill look into it. Im sorry but I forgot to include in my initial posting that I am using Linux. Im sure your other suggestions are very good but they seem to be Windows oriented. If your printer has no driver already, its highly unlikely that somebody will write a printer driver in Perl. Since Brothers website was primarily listing Windows stuff for your device, I made the assumption that you were on Windows.

Also, on that page, one of the links describes how to print from OpenOffice and Gimp. Check out past polls. PerlMonks is a proud member of the Beefy Boxes and Bandwidth Generously Provided by.
