Reload to refresh your session. The TC4400 exterior casing remains essentially the same as the TC4200. The new TC4400 is a solid businessclass machine. The design exemplifies durability and endurance, yet hints at practical simplicity. The TC4400 boasts utility, professionalism and style to suit the most conservative of business travelers. The TC4400 feels solid, as if it won't crumble in a tight space in your bag or under a safe, tight grip. When the display on many Tablet convertibles and notebooks is closed, it makes me feel uneasy to apply any more pressure than the minimum required to prevent an "accidental" drop. The TC4400 feels exquisitely durable with the lid closed, open or when folded down into "tablet mode". The entire unit is constructed of strong black and charcoal plastics, giving the TC4400 a professional appearance with a basic, yet sleek style. HP states that a special "scratchresistant, inmold lamination" is used to keep the unit "looking newer longer". Also included is a spillresistant keyboard and shock mounted hard drive. Although I performed no "scratch", "drop" or "spill" test of any kind, I will just go along with HP's word and concur that the materials look like they will hold up for the long haul, and endure the many adventures of the road warrior. To keep the unit compact, HP decided to forgo a builtin optical drive which I can live with. However, one slight disappointment is a lack of external stereo sound. There is oddly just one speaker on the left side of the unit. To hear audio in stereo with the TC4400, you'll need headphones or external speakers to plug into the headphone jack. Luckily the fan on the TC4400 is so quiet, you can hear the hard drive's lowly murmur over it. So at least you won't need to crank up any mp3's to cover up that kind of racket! Oh how I hate fan noise! The only time I noticed any heat issue is when the battery is charging.

The IR port for connecting to PDA's, cell phones and remote controls is to the right of the lights. In the center is the pushbutton latch to release the display. This display produces crisp text and exhibits even lighting, although it is not especially bright. The screen surface has a matte finish that provides adequate traction for writing with the pen, minimizing slippage. Our review model was free of any stuck or "dead" pixels. As the TC4400 is geared towards the business user, this model is not going to shine as a gaming machine. The TC4400 has one mono speaker. Although this works for Windows XP prompts, it is not going to do any justice to listening to your favorite mp3s or DVD playback external drive required. The motherboard luckily has stereo output, so grabbing a good pair of headphones or external speakers will do the trick for any audiophiles suffering from withdrawals. The keys are responsive and are easy to adapt to even after hopping on after using a fullsized desktop keyboard all day. The touchpad has a smooth, responsive surface and allows vertical scrolling. ThinkPad users who move into this model will feel right at home. There are four rubber coated mouse buttons. One set is under the trackpad and a second set is placed right below the spacebar. The addition of the second pair offers extra versatility for the most demanding users.

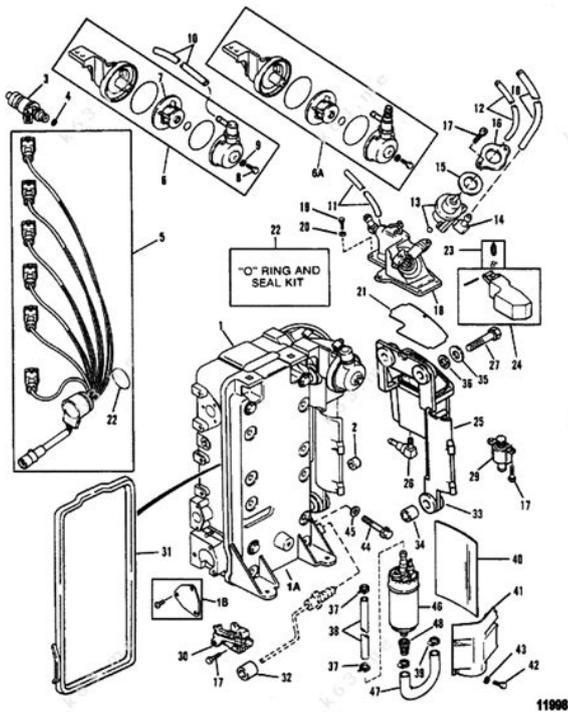

The buttons have a nice feel and don't require excess pressure to engage a response. The pen is a bit shorter than average, but more importantly the "right click" button doesn't cause interference with writing. The pen is housed in a slot on the left side of the TC4400 display. This open source benchmark application allows the user to change the number of digits of Pi that can be calculated from 16 thousand to 32 million. The benchmark, which uses 20 iterations in the test, was set to 2 million digits. The fan on this model rarely turns on until the processor reaches well above 50 degrees Celsius.

<http://ninethreefox.com/?q=node/13897>

Even when the fan engages, it is whisper quiet, a characteristic that is uncommon with many PC notebook fans. Overall we found the wireless connectivity on the TC4400 to be troublefree and reliable. The TC4400 can be custom configured with a bluetooth module for users as well. We were able to drain the battery in 88 minutes. The TC4400 also features an "ambient light sensor" that can help to conserve battery power automatically by automatically setting screen brightness. Also included is the HP ProtectTools Security Manager software. This extra security goes well beyond the any measures included in Windows XP. For this review, I placed my "traditional random support call" to HP at 18004746836. I called the number at 831 a.m. PST on a Friday morning. I went from the recording to an actual human being in 1 minute and 21 seconds. I would recommend this model to consumers and business users looking for a portable, nononsense, secure Tablet PC Convertible. The TC4400, with its Core Duo CPU and solid build is powerful and built for the road. It can be used in the position of a normal laptop or the screen can be turned and folded down for writing. The following is a list of common specs on current models You can help Wikipedia by expanding it. v t e By using this site, you agree to the Terms of Use and Privacy Policy. The Tablet PCs mobility combines with a variety of ink and speech tools to let you take your PC to many more places, and use it in many new ways. Intel Core Solo and Intel Celeron M processors are also available. An optional outdoor viewable display is available for outdoor or bright environments. HP Fast Charge Technology charges the primary battery up to 90% in 90 minutes then charges the secondary battery. Products and names mentioned are the property of their respective owners.
